3. The proposed specification corrections received on March 15, 2006 are approved by Examiner.

Response to Arguments

4. Applicant's arguments filed March 15, 2006 with respect to claims 1, 6, 7, and 11 (Cypher '680) have been fully considered and are persuasive (see App's Response page 10, lines 14-17). The rejection of claims 1, 6, 7, and 11 (Cypher '680) has been withdrawn.
5. Applicant's arguments filed March 15, 2006 with respect to claims 1, 6, 7, 8, and 11 (Cypher '992) have been fully considered and are persuasive (see App's Response page 10, lines 24-27). The rejection of claims 1, 6, 7, 8, and 11 (Cypher '680) has been withdrawn.
6. Applicant's arguments filed March 15, 2006 with respect to claims 1-7, 9, and 11-17 (Choi et al. '999) have been fully considered and are persuasive (see App's

Response page 11, lines 10-14; see discussion infra Conclusion). The rejection of claims 1- 7, 9, and 11-17 (Cypher '999) has been withdrawn.

7. Applicant's arguments filed March 15, 2006 with respect to double-patenting claims 1-7, 9, and 11-15 (Choi et al. '999) have been fully considered and are persuasive (see App's Response page 11, lines 24). The double-patenting rejection of claims 1- 7, 9, and 11-15 (Cypher '999) has been withdrawn.

Allowable Subject Matter

8. **Claims 1-17, and 56-68 are allowed.**

9. The following is an examiner's statement of reasons for allowance:

With respect to independent claim 1, 6, and 11, there is no teaching or suggestion in prior art to data lines configured to serially transfer at least one bit of data with at least one bit of auxiliary information.

With respect to independent claim 10, 56, and 60, there is no teaching or suggestion in prior art to the inversion controller including a storage unit for storing inverting codes of the data.

With respect to independent claim 56, there is no teaching or suggestion in prior art to a storage unit for the inversion controller included with the auxiliary circuit where the transceiver unit connects to the storage unit of the inversion controller for transferring the inverting codes between the inverting parity controller and the data lines.

With respect to independent claim 63, there is no teaching or suggestion in prior art to an input auxiliary circuit receiving input auxiliary information of the input data and an output auxiliary circuit generating output auxiliary information of the output data.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Sawamura et al. (U.S. Patent 6,853,595).

Sawamura et al. show a memory device that transfers data using a first set of bitlines and transferring auxiliary information using a second set of bit lines.

For clarity purposes, it is noted that the Applicant indicated that, "auxiliary information is transferred by strobe lines 184 and **194** in Fig. 1" (see App's Response page 11, line 12). Examiner assumes that it was Applicant's intent to indicate the strobe lines 184 and **182** (which is disclosed in Choi et al. '999 as being a strobe/auxiliary line; and corresponds to Figure 2 [WDQS]).
